

A² SDLC : Uncoding the legacy to Elevate Product Development with AI

IoTShow, 14 May 2026

Sanil Kumar D, Founder, CEO, Caze Labs

Easy Access to AI Chatbots, Ask Anything!

We started building a habit of zero-shots (Ask anything and keep asking!)

We are IT guys!

How about Software Development?

SDLC

Deliverables : Software and Documents

Other Roles : Product Owner, Project Manager, CMO, Content Writers

Complexity increased...

Increasing Abstractions, Increasing Speed

SOFTWARE COMPLEXITY OUTPACES HUMAN CAPACITY

AI is not replacing the SDLC; it is becoming a critical participant inside it to unblock the pipes.

Market Demands, API Changes,
Technical Debt Compound

Human Review Capacity
& QA Bottlenecks

AI Agent Orchestration &
Autonomous Verification

Code Generation

Automated Testing

Security Scanning

Deployment Automation

A² SDLC (AI Augmented SDLC)

- AI agents actively participate - Extended Team
- Humans orchestrate the outcomes
- SDLC becomes intelligence-driven
- Faster Product Deployments

“AI should not be treated as a tool.
It should be treated as a team member with a role.”

From Chatbot to Co-Developer...

Code Generation

Building Solution

Can we communicate our “intent” well?

The Bottleneck vs. The Accelerator.

	Traditional SDLC (Human Only)	AI-Native SDLC (Human + AI Team)
Pace	Weeks to Months	Hours (Micro-sprints)
Role of Human	Creator / Coder / Tester	Architect / Reviewer / Director
Role of Tech	Passive Tools (IDEs, Jira)	Active Co-Developers (Agents)
Communication	Endless meetings & tickets	High-precision prompting
The Bottleneck	Technical bandwidth	Human imagination & logic

Future engineers spend less time:

</> Writing boilerplate

🔍 Searching documentation

🐛 Debugging repetitive issues

And more time:

💡 Designing intent

🛡️ Governing quality

🤖 Orchestrating agents

✅ Validating outcomes

🎯 Aligning business goals

Coding Systems

Directing Intelligence

The Pivot from Execution to Orchestration:
Developers move from coding systems to directing intelligence.

Role: AI as your Lead Business Analyst **Action:** Use LLMs to instantly scope applications and translate a raw idea into precise, actionable requirements

Action: Use LLMs to instantly scope applications and translate a raw idea into precise, actionable requirements

Design: Text to Interface

Role: AI as your UX/UI Lead

Action: Generate application assets on the fly. Translate text requirements into intuitive user flows and application designs instantly.

AI-Ready PRD

This is an AI-ready Product Requirements Document (PRD) template. It includes a clear structure, concise language, and specific details that enable AI tools to generate high-quality user interface designs and user flows.

Functional Specifications

The functional specifications describe the core features and user interactions of the application.

- Functional Specification 1: User authentication and authorization.
- Functional Specification 2: Data management and reporting.
- Functional Specification 3: User profile management.
- Functional Specification 4: Integration with external services.
- Functional Specification 5: System administration and monitoring.
- Functional Specification 6: Security and compliance.
- Functional Specification 7: Performance optimization.
- Functional Specification 8: Scalability and flexibility.
- Functional Specification 9: Accessibility and usability.
- Functional Specification 10: Localization and internationalization.

User Stories

User stories provide a human-centric view of the requirements, focusing on the needs and goals of the end users.

- User Story 1: As a user, I want to create an account so that I can use the application.
- User Story 2: As a user, I want to log in so that I can access my data.
- User Story 3: As a user, I want to manage my profile so that I can keep my information up to date.
- User Story 4: As a user, I want to view my reports so that I can understand my data.
- User Story 5: As a user, I want to integrate with my favorite tools so that I can streamline my workflow.
- User Story 6: As a user, I want to monitor system health so that I can ensure everything is running smoothly.
- User Story 7: As a user, I want to configure security settings so that I can protect my data.
- User Story 8: As a user, I want to optimize performance so that I can get the most out of my application.
- User Story 9: As a user, I want to ensure accessibility so that everyone can use the application.
- User Story 10: As a user, I want to support multiple languages so that I can reach a global audience.

Data Models

Data models define the structure and relationships of the data used in the application.

- Data Model 1: User profile data.
- Data Model 2: System configuration data.
- Data Model 3: Report data.
- Data Model 4: Integration data.
- Data Model 5: Security data.
- Data Model 6: Performance data.
- Data Model 7: Scalability data.
- Data Model 8: Accessibility data.
- Data Model 9: Localization data.
- Data Model 10: Internationalization data.

AI-Ready PRD

Instant Cross-Modal Translation

Development: Building the Engine

Role: AI as your
Frontend & Logic
Engineer

Action: Feed blueprints into
AI app-builders to generate
interfaces and wire up basic
logic.

Zero Manual Coding. No Technical Co-Founder Required.

The Four Pillars for AI-Native Success

Knowledge Base

Context docs, PRDs,
project.md, domain

Tools

Capabilities agents
can invoke

Rules

Constraints, safety
boundaries

Guidelines

Best practices,
patterns, standards

Without all four pillars, agents produce impressive but ungovernable output.

The A² SDLC (AI-Augmented SDLC)

AI Native SDLC

Deliverables : Software and Documents

Human+
AI Team

AI Agents as Business Analyst, Architects, Developer, Tester, Document Writer, Deployment Engineer and so on....

Made with  Napkin

AI Augmented and Accelerated! (A²SDLC)

Who is this Workflow For?

Where is my AI Team?

How to work with them?

Working with AI Team!

Intent to Intelligence

IoTShow Agenda Copilot AI [Project.md](#)

1. AI-Assisted Requirements

Lowest-risk entry point

2. AI Pair Programming

Controlled developer productivity

3. Internal AI Standards

Building prompt libraries and skills.md templates

4. AI Review Pipelines

Automated governance and CI/CD integration

5. Agentic Workflows

Specialized AI roles deployed across the full SDLC

“

Organization:

100% Code Review

”

“

Architect / Tech Lead:

**Without I review,
I cannot merge!**

”

Culture Eats AI Strategy for Breakfast

Organizations failing with AI usually have a culture problem, not a technology problem.

The Responsibility Matrix

Dimension	Human Leads	AI Leads	Hybrid
Business Intent	✓		
Ethics	✓		
Governance	✓		
Coding Velocity		✓	
Pattern Detection		✓	
Testing Scale		✓	
Strategic Decisions	✓		
Creativity & Innovation			✓

It is not Human vs. AI. It is Human + AI systems.

Top 5 Operating Practices

Train in Collaboration.

Not just prompting—teach orchestration.

Measure Outcomes, Not LOC.

Velocity does not equal lines of code.

Humans Own Decisions.

AI assists and scales; humans govern consequence.

Build AI Councils.

Cross-functional governance across Engineering, Security, Legal, and Product.

Benchmark Quality.

Treat AI prompts and skills like production infrastructure.

The Future of Product Development

“The companies that master AI-native SDLC will out-innovate traditional engineering organizations by orders of magnitude.”

The Paradigm of Intelligence

“The next generation of engineering organizations will not be defined by how many developers they hire — but by how intelligently humans and AI collaborate through the lifecycle of innovation.”

AI will take my job?

Someone using AI better than you might!

Thank You!
